EDUCATION

Temple University | Philadelphia, PA | GPA: 3.5/4.0

May 2026

Bachelor of Science in Information Science & Technology

Relevant Coursework: Data Structures, Program Design and Abstraction, Component-Based Software Design, Database Management Systems, Computer Architecture, Operating Systems and Networking, Mathematical Concepts in Computing, Problem Solving and Programming in Python, Calculus I, Cybercrime.

Activities: Founding Father, Phi Mu Delta Temple University chapter.

RELEVANT SKILLS

Programming Languages: JavaScript, C#, Java, Python, SQL, HTML, CSS/SASS

Additional Technologies: React, Angular, Ionic, TypeScript, .NET, ASP.NET Core MVC, Redux, Node.js, Cypress, Jest, CircleCI, Postman, AWS, Git, Figma, REST APIs, Vercel, Claude Code, Cursor

Certifications: Project Management (Harvard ManageMentor), Microsoft Technology Associate: Security Fundamentals, Cypress: Web Automation Testing, Modern React with Redux, JavaScript: Understanding the Weird Parts, SASS Workflow (Udemy)

RELEVANT EXPERIENCE

Full Stack Engineer – Excellis Interactive | King of Prussia, PA

June 2025 – Present

- Build and ship full-stack CRM applications end to end, turning BRDs and Figma or Vercel designs into .NET APIs and Angular front ends.
- Develop cross-platform web and mobile applications with Ionic and Angular on a .NET backend, covering data model and API design through to the responsive UI.
- Own ongoing support for 6 legacy codebases: triaging fix requests, debugging production issues, and delivering changes without disrupting live users.
- Helped build a suite of AI skills that draft BRDs, review them for gaps, and generate development tickets, cutting the time from business request to sprint-ready work.
- Work directly with stakeholders, designers, and developers through sprint planning, code reviews, and daily standups to keep delivery predictable and quality high.

Software Engineer Intern – Sutable.co | Philadelphia, PA

April 2023 – August 2024

- Wrote comprehensive Cypress end-to-end and Jest unit tests across the platform, expanding coverage of critical user flows and catching regressions before release.
- Converted legacy Angular components into modern React components, modernizing the front-end codebase while preserving existing functionality.
- Configured and optimized CircleCI pipelines to streamline builds, including an automated system to rerun failed tests that reduced false failures and improved pipeline reliability.
- Built new REST APIs modeled on existing endpoints, using Postman to test requests, validate responses, and document behavior for the team.
- Implemented a scheduling system to automatically delete unused AWS resources, reducing monthly cloud spend.
- Partnered with senior developers in daily code reviews to design test cases and improve overall code quality.

LEADERSHIP

Head of Competitive Operations – Temple University Esports | Philadelphia, PA

Marvel Rivals Player

- Directed competitive operations across multiple esports teams, managing game-specific team leads on recruitment, scheduling, and player development.
- Organized and hosted a collegiate LAN tournament in Center City Philadelphia, bringing together teams from multiple schools.
- Competed on the Marvel Rivals roster that won the 2026 NECC Division II National Championship.

PROJECTS

ActiveStaysPlanned – Temple University | Philadelphia, PA

ASP.NET Core MVC, C#

- Built a travel booking web application comparable to TripAdvisor or Expedia, with a working checkout flow as a proof of concept.
- Migrated the original Web Forms build to ASP.NET Core MVC with a partner while adding new features throughout the application under strict requirements and a limited timeline.

Pet Adoption Application + Database – Temple University | Philadelphia, PA

C#, SQL

- Designed a relational database and C# application with separate customer and employee roles, supporting account creation, breed search, adoption statistics, and application submission.
- Implemented employee tools for adding, modifying, and deleting records, approving or denying applications, managing users, and triggering automated confirmation emails.

Movie Review Website – Temple University | Philadelphia, PA

React.js, TMDB API

- Built a responsive React application consuming the TMDB API to browse films and surface rating and review data.
